

REDUCE YOUR TRAVEL PROGRAM'S ENVIRONMENTAL FOOTPRINT

Seamlessly integrate your Concur Travel and Expense data into GATE4 Insights for the industry's most accurate emissions reporting.

To build the right sustainability strategy, accurate reporting is key

GATE4 Insights is powered by the only ISO-certified carbon emission calculation methodology designed for business travel. With GATE4, travel managers can track emissions across their air, hotel, rail, and car programs.

GATE4 accounts for multiple factors not included in standard reporting, such as country-level electricity mix, carbon intensity, aircraft type, radiative forcing, hotel eco-labels, amenities, and more.

Without accounting for these factors, travel managers risk creating policies or directing travelers towards unintentionally increasing travel-related emissions.

With GATE4 Insights, you can monitor and evaluate suppliers' sustainability performance, identify share shift opportunities, and **reduce travel program emissions**.

GET STARTED TODAY

+ Avoid inaccurate emissions reporting:

GATE4 Insights is proven to yield the industry's most accurate emissions reporting across air, hotel, rail and car programs.

+ Develop a clear roadmap to achieve goals:

As an ISO-certified methodology, GATE4's reporting figures can be included in annual financial reporting and assist with creating science-based sustainability targets.

+ Educate and influence travelers:

With an understanding of your program's carbon footprint, you can create traveler facing communications designed to shift share and drive sustainable decision making.
